BEAKERS

Beakers are widely used in research industry and education, They are ideal for heating, because of the optimum balance between thermal resistance and mechanical strength due to controlled wall thickness at sides, radius, radius and bottom. The spouts wherever incorporated are designed to have excellent pouring characteristics.

Bottles are available for every use, Since the Aspirator, Reagent and Solution bottles are not used for direct heating purpose they are made mechanically stronger with heavier wall thickness and these can withstand wet or dry sterilisation. Due to excellent chemical durability of the glass, most reagents can be stored in these bottles without much effect for long durations. Plain neck Solutions Bottles and Centrifuge Bottles are tooled for uniform rubber stopper fit. Roux Bottles, Milk Dilution Bottles are widely used for culture growth, and they have flat surface.

BURETTES

Where you use a burette you expect accuracy, reliability and durability only brand burettes offer all three even after repeated usage, A combination of the best material and workmanship goes into brand burettes. The highest quality accurate-bore tubing is selected to provide uniform and accurate graduations. Each burette is individually calibrated for precision and high accuracy. All graduations are in durable white enamel, The burette stopcocks are specially ground so that they provide a leak proof operation. It is advantageous to use different types of greases depending on the reagents used to get leak proof operations Stop-cock plugs are solid pressed and ground These are not interchangeable.

In addition to Burettes with glass stop-cocks we have burettes with straight bore PTFE stopcocks and a range of Boroflo Burettes fitted with Boroflo (GP) Screw thread stop-cocks with PTFE Keys.

Boroflo Burettes are fitted with Boroflo GP (General Purpose) Screw thread Stopcocks with PTFE keys offering the following operational advantages-

Lubrication never required - no seizure, no contaminating greases.

Excellent flow control-invaluable on burettes

All glass / PTFE pathway, highly resistant to chemical attack

No leakage-unique Fluon / glass seal

No springs or retaining devices - easy to dismantle and clean

No ground surface - low absorption of radioactivity

Consistent performance between 0°C and 50° c.

For accurate work, Class A Burettes are available.

The above condensers are widely used in research labs. All double-surface condenser has a water jacket both on the outside and through the centre of the condensing tube. It is needed where the condensed liquid is very volatile. Hence for distilling ethers, alcohols, esters, aromatics, petroleum products, and essential oils these condensers are widely used.

Measuring cylinders serve simultaneously to receive and measure different amounts of liquids. Made from specially drawn tubing with durable, easy to read graduations for assured accuracy.

Brand Cylinders are built to last. We have built strength features into every cylinder. Heavy uniform wall tubing and strong stable hexagonal base contribute to sturdiness. Hexagonal base also prevents them from rolling off a laboratory bench. They are available in capacities from 5 ml to 2000 ml.

For accurate work, Class A certified cylinders are available

Our range also includes Nessler Colour Comparison and Rain Measure Cylinders.

PIPETTES

Brand pipettes are manufactured from specially selected heavy wall machine-drawn borosilicate accurate bore glass tubing. They have precision formed jets, bevel ground ends to resist chipping laboratory reagents and repeated washing. All the pipettes are individually measured and then marked. Due to uniformity of bore, accuracy is ensured between any two readings. The pipettes can be autoclaved and if necessary can be flamed for sterilisation. Delivery time of the pipettes have been decreased as a result of changes in international standards.

LABORATORY GLASSWARE

QUARTZ WARE

TRANSPARENT LABORATORY WARE

Fused silica 99.95% SiO₂ surpasses all of the desirable chemical and weathering durability properties usually associated with Silica ware. We manufacture as per IS and BS Standards.

- There is little or no visible surface change or damage to silica with prolonged exposure to water, atmospheric gases, contaminants, oxide of nitrogen and ozone.
- Attack does occur, on exposure to alkaline solution and acids at very high temperatures.
- Low expansion and hence excellent dimensional stability and thermal shock resistance.

Resistant to chemical attack.

Electrical resistivity (at 350 C)

Low Expansion and constancy of Weight

Softening Point	1685 C
Operating Temp (continuous)	1050 C
Operating Temp (intermittent)	1350 C

Virtually unaffected by sulphuric, nitric and hydrochloric acids. Hot alkalis and certain metal oxides react on silica. It is attacked by hydrofluoric acid. At high temperatures, it is also attacked by phosphoric acid.

Continuous use of fused silica above 1000°C leads to detritification with formation of cristobalite which is a crystalline phase and will lead to breakage on repeated use. For accurate and long use, it is advisable to wash the articles in distilled water and alcohol to remove trace impurities.

Heating fused quartz to elevated temperatures causes SiO₂ to undergo dissociation. Consequently when flame-working fused quartz, there is a band of haze or smoke which forms just outside the intensely heated region. This haze presumably forms because the SiO₂ recombines with oxygen from the air (and perhaps water) condenses as extremely small particles of amorphous SiO₂.

HPSF® purification is a proprietary technology which utilizes a novel reverse phase cartridge based chromatography. HPSF® is a registered trademark of MWG Biotech AG. This technology has been developed at Eurofins MWG Operon's research and development centre. HPSF® enables the delivery of oligonucleotides with lowest level of carryover of trace contaminants ideal for a wide variety of enzymatic and probe based procedures. HPSF® oligonucleotides can be used for various techniques such as PCR, DNA sequencing, primer extension, cDNA library generation, Northern and Southern blotting.					
*Please enquire us for the prices of 1 μ mole and 10 μ mole plate Oligos.
